# Key Features

What can you do in Objective Build?

Objective Build makes applying for and managing building consents consistent, transparent, and efficient. It is a central hub for everything related to your building consents – with content centrally located and easily shared throughout your organisation.

NZ.OBJECTIVE.COM

Key features include:

Apply for Building Consents

The platform makes applying for consents consistent across councils. As well as applying for your consent, you're also able to apply for a Code Compliance Certificate (CCC), a Certificate of Acceptance (COA), Project Information Memorandiums (PIM) and more.

All of your applications made with Build will be visible through a single logon, irrespective of which council they are lodged with.

Manage your organisation

Ensure the right people have the right information. You can add and remove people to your organisation, giving them the ability to view consents, track their status and be notified of relevant updates – helping keep everyone in the loop.

Track the status of a consent and receive updates

See exactly where a consent is in the process, as well as any outstanding actions for all stakeholders. You can also ensure you're receiving updates as anything changes on a consent, helping to avoid delays and keep you updated.

Respond to RFIs

Manage all communication with the council directly from Objective Build, including responding to RFIs. Be notified of new RFIs and see the details in status screen, reply and upload any supporting information all in a single place, with the data going instantly to council when you hit submit.

Collaboration

Make sure everyone who needs access to a consent has it through collaboration tools, assign a primary owner for set stages (for example, the builder on site as the key contact for inspections) so that everyone involved is kept informed. If people go away or on leave, their consents are visible in the system, avoiding information silos.

Contact and Document Libraries

Create a library of your most common consents and use them as templates so you don't need to repeatedly fill in the same information. Save key contacts to add to applications without needed to enter their details again. You can template several document types, from wood burners through to standardised plans you offer.
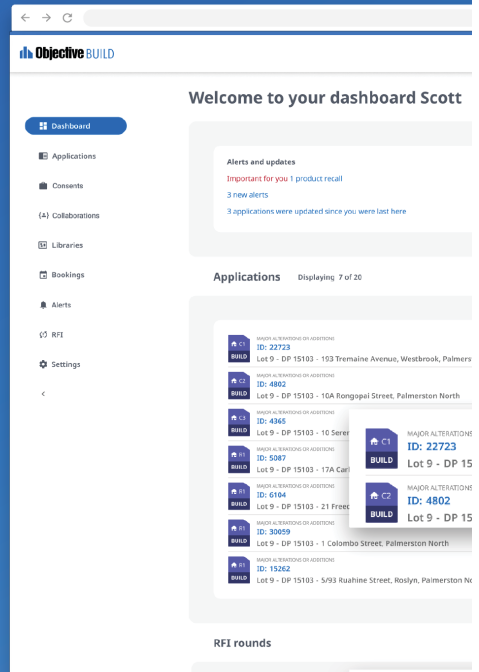

Objective BUILD

INTRODUCING
OBJECTIVE BUILD

An effective building application management platform, helping the construction sector and local government thrive.

Making it easier for architects, designers and builders to obtain approvals for buildings and developments.

Injecting consistency, transparency, quality and efficiency into the building application and assessment process will help create high-quality buildings, support housing construction and drive social and economic outcomes for their communities.

There are hundreds of benefits to Objective Build. To see more of what you can do take a look at our help centre for video tutorials of our favourite features.

If you have any questions at all, our support team are around to help.

Just email **build.support@objective.com** or call 0**800 024 508**. They're available Monday to Friday 8:30am to 5:00pm
